Professional Summary

A motivated and detail-oriented engineering graduate in Artificial Intelligence with a strong foundation in Python, SQL, and Data analytics, seeking a Data Engineer or Data Analyst role. Hands-on experience building end-to-end analytics projects using Databricks, MLflow, and Power BI, including customer churn and cohort retention analysis. Skilled at cleaning, transforming, and modeling data to deliver clear, actionable insights. Eager to build reliable data pipelines and support data-driven business decisions in a growth-oriented organization.

Technical Skills

Programming	:	Python
Databases	:	MySQL, Databricks SQL
Data Analytics	:	SQL, Pandas, NumPy, EDA, Data Cleaning, Data Validation
Data Engineering	:	ETL Pipelines, Data Transformation, Data Integration, Databricks
Visualization	:	Power BI, Excel, Matplotlib
AI/ML & Tools	:	Artificial Intelligence, Machine Learning, Git, GitHub
Core Skills	:	DBMS, OOPS, Problem-Solving, Communication, Team Collaboration

Education

Anurag University 2022 – 2026
B.Tech, Artificial Intelligence

Narayana Junior College 2020 – 2022
Intermediate, Percentage: 70.1%

Sri Chaitanya High School 2020
Schooling, CGPA: 9.7

Projects

Olist E-Commerce Data Analytics | GitHub - Repository

- Built an end-to-end e-commerce analytics project using the Olist dataset, covering data validation, SQL analysis, business insights, and dashboard development.
- Validated multi-table transactional data using primary key, foreign key, null, date, price, and review score checks.
- Analyzed sales, revenue, products, payments, sellers, customer geography, delivery performance, and reviews using SQL; developed a Databricks AI/BI dashboard with 12 visualizations.

Tools Used: SQL, Databricks AI/BI, GitHub

KKBOX Churn & Cohort Retention Analysis | GitHub - Repository

- Built an automated batch analytics and machine learning pipeline to analyze subscription churn, cohort activity, and customer behavior for a music streaming business.
- Created a leakage-safe 200,000-customer analytical dataset, engineered subscription and transaction features, and analyzed cohort activity and churn patterns.
- Compared Logistic Regression and Random Forest models, achieving 0.9465 ROC-AUC; tracked experiments with MLflow and developed a Power BI dashboard.

Tools Used: SQL, Python, Databricks, MLflow, Power BI, GitHub

Certifications

- Deloitte — Data Analytics Job Simulation
- IBM Skills Network — SQL and Relational Databases 101
